PURE PATH LAB | LABORATORY MANAGEMENT SYSTEM

Software Requirements Specification

Single-laboratory pathology and basic radiology system
Requirements, delivery, acceptance and commercial terms

Version 3.0 • 04 October 2026 • Issued for review and acceptance
Prepared by **KSpark Digital Services** • GSTIN 09HULPS0015P1ZY

DEVELOPMENT CONTRACT	BASIC AMC	DEFECT-FIX WINDOW
₹60,000 fixed	₹2,000 per month	30 days after go-live
One-time build; milestones on page 12	₹24,000 per year equivalent	AMC starts after this window

Commercial summary

The fixed development contract is **₹60,000**. The optional Basic AMC is **₹2,000 per month (₹24,000 per year)**, beginning after the 30-day post-go-live defect-fix window. AMC covers defect fixes and keeping the delivered system working. New or immediate changes are separately estimated and billed only after written approval.

This specification defines the agreed product scope, delivery expectations, acceptance checks and payment terms for Pure Path Lab. Its requirements form the baseline for implementation and acceptance.

DOCUMENT CONTROL	DETAIL
Document owner	KSpark Digital Services (legal name: Kalpana Singh)
Client / product	Pure Path Lab — single-laboratory management system
Technology baseline	React 18 / Vite • Express 4 • Mongoose 8 • MongoDB Atlas
Hosting baseline	Client-owned Vercel project and MongoDB Atlas Free (M0) at launch
Version and status	3.0 • 04 October 2026 • Issued for review and acceptance
Supersedes	SRS v2.0 dated 03 October 2026

Prepared by: KSpark Digital Services | **GSTIN:** 09HULPS0015P1ZY

Document guide

How to read the scope, requirements and commercial baseline.

SECTION	CONTENTS
1	Introduction and purpose
2	Product context, user roles and operating environment
3	Functional requirements (FR-01 to FR-14)
4	Non-functional requirements
5	Delivery, dependencies and risks
6	Acceptance checks and traceability
7	Development price and milestone payments
8	Basic Annual Maintenance Contract (AMC)
9	Third-party costs, scope control and exclusions
Appendix A	Data entities and API route inventory
Appendix B	Approval and sign-off

Document conventions

- **SHALL** identifies a binding requirement for the delivered build.
- **FR** means functional requirement; **NFR** means non-functional requirement; **AC** means acceptance check.
- Amounts are stated in Indian rupees (INR). The development contract and AMC are separate charges.
- Items explicitly identified as minimal or as-is are retained at their stated current scope.

Revision history

VERSION	DATE	CHANGE
1.0	03 Oct 2026	Initial SRS from codebase review.
1.1	03 Oct 2026	Agreed operating assumptions and dependencies added.
1.2	03 Oct 2026	Billing entity and proposed development milestones recorded.
2.0	03 Oct 2026	Commercial annexure, acceptance checks and appendices consolidated.
3.0	04 Oct 2026	Reorganised for clearer SRS reading; development payment terms and Basic AMC scope stated in plain language.

Commercial terms at a glance

Development: **₹60,000 total** as a fixed one-time contract, proposed in three milestone payments. Basic AMC: **₹2,000 monthly**, or **₹24,000 for twelve months**, after the 30-day defect-fix period. AMC does not include new functionality, immediate change requests, or third-party bills.

1. Introduction

Purpose, scope and intended use of this specification.

1.1 Purpose

This Software Requirements Specification (SRS) defines the functional and quality requirements, delivery assumptions, acceptance method and commercial terms for the Pure Path Lab Laboratory Management System (LMS). The system supports a single pathology laboratory with basic USG and X-ray workflows.

1.2 Product scope

The system covers staff access, patient registration, billing and collections, test masters, report entry and sign-off, report printing and PDF generation, QR verification, barcodes and sample labels, business accounts, patient OTP access, notifications, and basic USG / X-ray case handling. The priced scope is described in Sections 3 and 5–6.

1.3 Scope boundary

The implementation shall finish the requirements marked for completion in this SRS to a production-usable level and deploy the application to the client-owned accounts described in Section 5. Existing supporting features explicitly labelled minimal or as-is will be retained with limited functionality. A requirement not described here is outside the fixed-price baseline and shall follow Section 9 change control.

1.4 Intended readers

READER	USE
Laboratory owner / client	Review and accept the scope, payments, dependencies, and acceptance checks.
Delivery team	Implement and verify the requirements in this SRS.
UAT sign-off authority	Run the acceptance checks against the deployed build and record results.

1.5 Definitions

TERM	MEANING
Case / bill	A billing event linked to one or more laboratory reports.
TAT	Turnaround time, expressed in hours.
Verify / sign	Pathologist sign-off that finalises a report.
UAT	User acceptance testing performed by the client.
AMC	Annual Maintenance Contract. The agreed Basic AMC fee is collected monthly in advance.
DLT / Sender ID	Indian SMS delivery registration and approved sender details required for live SMS.
WABA	WhatsApp Business Account; WhatsApp messaging is excluded from this phase.

2. Product context

The system boundary, operating environment and user responsibilities.

2.1 Product overview

Pure Path Lab is a browser-based, online application. A React single-page interface communicates with an Express REST API and MongoDB database. The system generates laboratory PDFs and QR verification data, and accepts report images and signatory images through upload workflows.

2.2 User roles

ROLE	PERMITTED WORK
Administrator / superadmin	Application settings, laboratory profile, employees and permissions, rates, accounts, and report verification.
Pathologist	Review, verify, sign, reject, or request changes to reports; manage assigned signatures.
Technician / laboratory staff	Register patients, prepare bills, collect samples, enter results, upload images, and print.
Radiologist / USG / X-ray staff	Work modality cases, upload images, enter findings, preview reports, and sign off.
Accountant / cashier	Manage payments, dues, voids, cashbook, and expenses.
Patient	Use mobile number and OTP to view or download their own reports and bills. Patients do not have staff accounts.

2.3 Operating environment

- Desktop-first responsive web application; patient report access shall be mobile-friendly.
- Online use. Staff printing targets A4 laser or inkjet printers; labels use the approved sticker stock.
- Supported browsers: current Chrome, Edge, and Firefox.

2.4 Technology baseline

LAYER	BASELINE
Frontend	React 18, React Router v6, Axios, and Vite.
Backend	Node.js and Express 4 REST API, JWT staff authentication, file upload, PDF generation and QR generation.
Data	MongoDB via Mongoose 8; Atlas Free M0 at launch.
Hosting	Vercel static frontend and API rewrites, in the client-owned account.
Patient authentication	Mobile number and OTP session; MSG91 for live OTP delivery, subject to client credentials and DLT readiness.
Email	Client-provided SMTP account or provider.

3. Functional requirements

Staff identity, patient records, and laboratory test configuration.

FR-01 Staff authentication and employee management

- The application SHALL support staff login by email and password and issue authenticated staff sessions using JWT.
- The application SHALL provide employee creation, viewing, updating, activation and deactivation, role and department assignment, designation and joining details, and password reset.
- The application SHALL enforce access permissions on the server. The role and permission interface SHALL reflect the enforced access rules.
- Session listing and revocation SHALL be completed within the build.
- Rate limits SHALL be applied to authentication attempts. OAuth integration hooks may be configured where provider credentials are supplied.

FR-02 Patient management

- Staff SHALL be able to register patient demographic and contact information and link a referring doctor or agent.
- Staff SHALL be able to search patient records and view a patient’s related case, bill, and report history.

FR-03 Laboratory test master

- Authorised users SHALL manage test code, name, department, rate, unit, method, normal ranges, critical limits, age or sex applicability, turnaround time, and interpretation text.
- The test master SHALL support derived-test indicators and formulas, plus categories, panels, and packages.
- The build SHALL provide bulk rate revision. The source implementation currently supports individual rate changes; the bulk workflow is included in this fixed-price scope.

> **Access and patient privacy**
>
> Patient access is restricted to the reports and bills returned for that patient’s verified mobile number. Staff permissions are checked by the backend and SHALL not rely solely on hiding interface controls.

3. Functional requirements

Billing, business records, referral tracking and laboratory settings.

FR-04 Billing, payments and case creation

- Staff SHALL create a bill from searchable tests, panels or packages, with applicable rates, discounts, invoice numbering and paid, partially paid, pending or due status.
- Cashiers SHALL record full or partial collections and payment modes, review dues, and void a bill with a recorded reason.
- The application SHALL print invoices and generate a bill barcode. Each new bill SHALL link to the corresponding case and report workflow.
- The cashbook SHALL support filters and date-range summaries. Staff SHALL be able to record and review laboratory expenses.

FR-05 Accounts and business reporting

- Authorised staff SHALL review account balances and ledger transactions, outstanding dues, and department-filtered business records.
- The application SHALL provide referral and agent tracking, a daily business view, and test-usage analytics.
- Dataset export is included. JSON export is present in the source build; CSV export and export history are to be completed.

FR-06 Doctors, agents and laboratory settings

- Authorised staff SHALL manage referring doctors and link referrals to cases; agent and collector tracking SHALL be supported.
- Administrators SHALL configure laboratory identity, address, contact information, registration details, branding, and report numbering (default prefix PPL-).
- SMS notification templates SHALL be configurable through the settings interface.

Billing integrity

A payment entry shall be associated with the relevant bill and reflected in its paid, partial, or due balance. Void actions require a reason. The cashbook summary shall reconcile to recorded transactions for the selected test date range (acceptance check AC-03).

3. Functional requirements

Pathology reporting, verification, signatures and turnaround time.

FR-07 Report lifecycle and results

- The system SHALL generate linked reports from bills and provide Today, Due and Pending worklists with search and department filtering.
- Worklists SHALL display turnaround-time countdowns and due-soon or overdue indicators.
- Staff SHALL enter test results. Results outside configured ranges SHALL display HIGH, LOW, or CRITICAL flags as applicable.
- Pathologists SHALL be able to sign and verify reports, reject a report with a reason, or request changes with comments. Unsigned reports and a verification screen SHALL be available.
- The report sign-off action SHALL safely handle repeat submission, such as a double click.

FR-08 Report output and public verification

- Report preview and final PDF or print SHALL use the same output template.
- Final reports SHALL display configured laboratory letterhead, required report details, and applicable signatory information.
- The final report SHALL include a QR code containing a public verification URL. Public verification SHALL use a token URL and SHALL NOT expose internal database identifiers.
- Barcode labels, case and sample labels, and a sticker sheet SHALL be completed for the stock size agreed before UAT.

FR-09 Signatures and turnaround-time configuration

- Administrators SHALL create and assign signatory signatures by department. Reports SHALL use the selected signature at sign-off and render it in the output.
- Turnaround time SHALL be configurable per test and report, with default and urgent or emergency settings.
- Due and overdue status SHALL be calculated consistently using the laboratory’s local time convention.

Output baseline

The client supplies laboratory identity, registration details, disclaimer, logo, and signatory image files before the final template and UAT round. A4 is the report target; sticker layout depends on approval of the actual label stock.

3. Functional requirements

Radiology cases and retained supporting workflows.

FR-10 USG and X-ray case handling

- Authorised staff SHALL create and manage USG and X-ray cases and assigned worklists.
- Staff SHALL enter findings, upload relevant images with upload progress and retry feedback, preview the report output, and record sign-off.
- Image deletion and inclusion of images within report PDFs SHALL be completed in the fixed-price build.

FR-11 Doctor portal, appointments and support

- Existing basic doctor portal, appointment or booking flow, and support ticketing SHALL be retained in their current minimal working state.
- An advanced doctor portal and slot-availability engine are not part of the scope.

FR-12 Audit trail and notification jobs

- The application SHALL provide an activity or audit-log viewer once the planned event capture is implemented.
- The application SHALL provide visibility into failed notification jobs and retry status once the planned job handling is implemented.

3.1 Workflow summary

WORKFLOW	EXPECTED SEQUENCE
Pathology	Patient → bill and sample → enter results → review and sign → PDF / print → QR verification.
USG / X-ray	Create case → upload images → enter findings → preview → sign off.
Patient access	Verified mobile number → OTP → own report and bill list → view or download.
Notifications	Select patient / doctor recipients → send using SMS or email template → record delivery outcome.

Retained scope

Minimal or as-is features are included only as described in this section. Additional functionality requested for a retained feature is handled as a change request under Section 9.

3. Functional requirements

Patient OTP access, notifications and external interfaces.

FR-13 Patient OTP portal and public verification

- Patients SHALL sign in by mobile number and a one-time password; patient password accounts are not required.
- An OTP SHALL expire after five minutes by default. Verification SHALL allow at most three attempts by default, and resend requests SHALL be rate-limited.
- A successfully verified patient SHALL be able to list, view and download their own reports and bills.
- A final report QR scan SHALL open token-based public verification for that report.
- Development and testing may use provider test credentials while live MSG91 credentials and DLT approval are pending.

FR-14 SMS, email and delivery status

- The system SHALL support template-driven SMS and email sends from the report workflow, for one or multiple recipients, including patient and doctor recipients and optional cc / bcc.
- The system SHALL show Sent, Failed or Retry status and provide per-report delivery history.
- A failed notification SHALL NOT be shown as successfully delivered.
- The build SHALL connect MSG91 and the approved sender details once the client supplies credentials and DLT approvals.
- WhatsApp messaging and WABA configuration are excluded from this phase.

3.2 External services and ownership

SERVICE	INTEGRATION / RESPONSIBILITY
MSG91	Client supplies and funds the account, wallet and API key. Live SMS depends on approved DLT registration and Sender ID.
Email	Client supplies SMTP or a provider account and pays any provider charges.
Vercel	Application deployed to client-owned account; platform fees or overages are paid by the client.
MongoDB Atlas	M0 Free at launch; client owns the account and funds any required upgrade.
Domain	Client selects and owns the domain and pays registration and renewal; DNS connection is included.
WhatsApp	Excluded from this delivery scope.

4. Non-functional requirements

Baseline expectations for usability, security and output quality.

ID	REQUIREMENT
NFR-01	Responsive interface; usable on a 1366 px desktop. The patient portal shall work on mobile.
NFR-02	API access is authenticated. Staff permissions are enforced server-side. Passwords are not exposed. Authentication and OTP endpoints are rate-limited.
NFR-03	Report preview and final print / PDF use a single output layout. QR verification data remains readable in the PDF.
NFR-04	Repeated report-sign requests are safe. A failed notification is never represented as a successful send.
NFR-05	Report due and TAT calculations follow one configured laboratory local-time convention.
NFR-06	Public-facing pages include basic search metadata and a Lighthouse hygiene snapshot.
NFR-07	The system supports current Chrome, Edge and Firefox and A4 printing on laser or inkjet printers.
NFR-08	The build is deployed into the client-owned hosting and database accounts after required access is provided.

4.1 Security and access principles

Role-based permissions are checked by backend middleware for protected operations. OTP access is rate-limited, expires, and limits verification attempts. Public verification uses an opaque token URL. Client account ownership and access credentials are managed by the client.

4.2 Operational limitations at launch

The launch configuration uses Vercel and MongoDB Atlas Free (M0). Free-tier storage, backup, memory, and usage limits are accepted for launch. A hosting or database upgrade may be needed as usage grows and is paid by the client. File-storage persistence depends on the chosen hosting plan; additional persistent storage is outside the fixed build price.

4.3 Printing and report output

A4 is the standard report page. Barcode and QR content must remain legible when printed. Sticker dimensions are configured after the client approves the target stock. USG and X-ray previews shall match their printed or downloaded output. The client supplies accurate test ranges and laboratory review/signature content.

4.4 Third-party and client-controlled service levels

Availability, delivery times, pricing and service limits of Vercel, MongoDB Atlas, MSG91, the domain registrar and any email provider are governed by those providers. Those charges and service commitments are outside the ₹60,000 development contract and the Basic AMC fee.

5. Delivery, dependencies and risks

Client-provided inputs and environment setup needed for go-live.

CLIENT INPUT / ACTION	GATES
Laboratory name, address, phone numbers, registration number, timings, disclaimer and logo	Letterhead, PDFs and public verification page.
Two or three preferred domain names	Domain registration and production URLs.
Labsmart exports for tests, rates, doctors, patients and bills; two or three sample reports	Master data import, report-template alignment and any full-history migration estimate.
MSG91 account, wallet starter recharge and API key	OTP wiring and live message delivery.
Start DLT registration; obtain approved Sender ID and template	Production SMS / OTP activation. Development proceeds using test credentials meanwhile.
Staff list; pathologist names, titles and signature images	User setup, report sign-off and UAT. Interim capacity: up to 10 logins and 1–2 signatories.
SMTP access or chosen email provider	Live email delivery.
Approval of the proposed milestone payment schedule	Commencement and milestone invoicing.
A4 printer and approved sticker stock dimensions	Final report and label layout confirmation.

5.1 Included data import

One import of agreed master data (tests, rates, and doctors) from client-supplied exports is included. Full historical patient, bill, and report migration is not priced in this contract. It will be estimated after review of the actual exports.

5.2 Delivery risks and responses

RISK	RESPONSE
DLT / Sender ID approval delay	Use MSG91 test credentials during development; enable live OTP when the client's approved sender details are available.
Export window or format limits in Labsmart	Import agreed masters first; assess full history only after reviewing actual CSV files.
Free hosting / database tier limits	Start on accepted free tiers; client owns monitoring and any upgrade charges.
Delay in logo, rates, disclaimer or signatures	Use temporary content during early work and freeze approved content before the second UAT round.
Staff or signatory list not confirmed	Confirm users and signatories before UAT; interim allowance is limited to 10 logins and 1–2 signatories.

5.3 Client-held accounts

The client shall own the Vercel account, MongoDB Atlas account, domain, MSG91 account and email account. The delivery team will connect and deploy the application to those accounts using access provided for the work.

6. Acceptance checks

The client and delivery team use these observable checks during UAT.

ID	ACCEPTANCE CHECK	REQUIREMENTS
AC-01	Staff login → register a patient → create a bill → enter results → sign → produce report PDF / print with letterhead and QR.	FR-01 to FR-03, FR-07 to FR-09
AC-02	Patient verifies a mobile number by OTP and views / downloads their report when live MSG91 credits and DLT setup are available.	FR-13
AC-03	Record full, partial and due payments; void a bill with a reason; reconcile cashbook totals for a selected test date range.	FR-04, FR-05
AC-04	Create USG and X-ray cases, upload an image, preview and complete sign-off.	FR-10
AC-05	Print a bill barcode and verify a report by scanning its QR; check labels on client-approved sticker stock.	FR-07 to FR-08
AC-06	Deploy to client-owned Vercel and Atlas accounts, connect the approved domain, and complete administrator handover and one training session.	FR-01 to FR-14

6.1 UAT review

The client will provide consolidated UAT feedback in no more than two rounds, with the first consolidated defect list due within 14 calendar days of the UAT build delivery. A defect means delivered behaviour that does not meet an explicit requirement or acceptance check in this SRS. Requests for additional or changed behaviour are handled under Section 9.

6.2 Acceptance and defects

The delivery team will address confirmed in-scope defects identified during UAT. A milestone is treated as accepted if no SRS-related defect list is supplied within the stated 14-day UAT period. The 30-day post-go-live defect-fix window starts on production go-live and covers defects against this SRS.

6.3 Traceability

REQUIREMENT GROUP	VERIFIED BY
FR-01 to FR-03: access, patients, test master	AC-01, AC-06
FR-04 to FR-06: billing, business, settings	AC-01, AC-03, AC-06
FR-07 to FR-09: reports, signatures, TAT	AC-01, AC-05
FR-10: USG / X-ray	AC-04
FR-11 to FR-12: retained support functions	AC-06
FR-13: patient portal and OTP	AC-02
FR-14: notifications	AC-01, AC-02; provider credentials required

7. Development contract

One-time fixed price and proposed milestone payment schedule.

Fixed development contract

₹60,000 total

The fixed one-time build price covers the requirements in Sections 3–6, integration wiring, QA, the included master import, deployment to the client accounts, one training session and handover documentation. It excludes AMC fees, third-party charges, and separately approved changes.

7.1 Cost allocation

COST AREA	AMOUNT	COVERAGE
Backend development	₹25,000	REST APIs, authentication and OTP sessions, billing / accounts, report lifecycle, USG / X-ray cases, uploads, PDF / QR / barcode, permissions and backend test fixes.
Frontend development	₹25,000	Patient registration, billing, worklists, result entry, verification, preview, labels, cashbook, employees, settings, portals and responsive layout.
QA, integration and handover	₹10,000	End-to-end QA, integration wiring, Vercel / Atlas / domain connection, one-shot master import, one training session and handover documentation.
TOTAL FIXED PRICE	₹60,000	One-time development contract.

7.2 Proposed milestone invoices

MILESTONE	TRIGGER	AMOUNT
M1 — 40% advance	SRS sign-off and commencement of work.	₹24,000
M2 — 40% UAT build	Feature-complete build delivered for UAT.	₹24,000
M3 — 20% go-live	Production deployment, completed acceptance checks, and training.	₹12,000
TOTAL	Three development payments.	₹60,000

- Invoices are due within **7 calendar days** of issue. The next phase starts after the previous milestone payment is received.
- The milestone split is the proposed acceptance schedule recorded in the commercial terms; any alternative shall be agreed in writing before the affected milestone.
- Work outside the agreed scope requires a written description, separate estimate and client approval before that work begins.
- The commercial terms were recorded as valid for 30 days from 03 October 2026.

8. Basic Annual Maintenance Contract

Monthly billing for defect correction and continued operation of the delivered scope.

AMC Basic price

₹2,000 per month

Twelve monthly payments total **₹24,000 per year**. The monthly fee is billed in advance. Basic AMC begins after the 30-day post-go-live defect-fix window.

8.1 Included maintenance

- Correct reproducible defects where delivered behaviour fails to meet this SRS.
- Apply minor bug fixes needed to keep existing, in-scope application workflows working.
- Provide reasonable break-fix assistance for the delivered application and reconfigure the existing MSG91 connection when necessary and when client credentials remain valid.
- Maintain existing functionality within the delivered scope; the AMC does not add new functionality or expand scope.

8.2 Not included

OUTSIDE BASIC AMC	HOW IT IS HANDLED
New feature, module, integration, report, workflow or significant design change	Separately scoped, estimated and billed after client approval.
Immediate, urgent or out-of-hours change request	Not covered by the monthly fee. Availability and price must be agreed separately before work.
Third-party costs (hosting, database, domain, MSG91, email)	Paid by the client to the relevant provider at actual provider rates.
Data entry, data correction, bulk import or migration	Separately assessed and quoted.
Problems caused by a provider outage, expired credential or unpaid account	Client restores the provider account or credentials; additional service work is separately estimated.
New functionality requested during bug-fix investigation	Handled as a separately approved change request.

8.3 Billing and end of service

AMC is billed monthly in advance at ₹2,000 per month. The reference annual equivalent is ₹24,000 for twelve consecutive months. Either party may terminate with 30 days' notice; fees due through the effective termination date remain payable. The initial 30-day post-go-live defect-fix window is provided before paid AMC starts.

9. Third-party costs and scope control

Amounts outside the development contract and the process for approving changes.

ITEM	PAYER	COMMERCIAL BASIS
Vercel hosting and overages	Client	Client-owned account; deployment is included. Subscription charges and usage overages are separate.
MongoDB Atlas above Free M0	Client	Free tier at launch; upgrades and backups beyond tier limits are client costs.
Domain registration and renewal	Client	New registration and renewal paid directly by the client; DNS connection is included.
MSG91 OTP / SMS and DLT	Client	Wallet recharge, per-message charges, regulatory registration and sender approvals are separate. The source estimate was approximately 1,000 OTPs monthly; provider pricing may change.
Email delivery	Client	Client SMTP or provider charges paid directly by client.
WhatsApp / WABA	Excluded	Not part of this phase; may be separately estimated as a later phase.
Full historical migration or other design work	Separately estimated	One-time agreed test / rate / doctor master import is included. Work beyond that import is estimated after data review.

9.1 Change-control process

The client describes the requested change. The delivery team identifies whether it is a defect against this SRS or a change in behaviour or scope. For a change, the delivery team supplies a written scope, price and delivery impact. Work begins after the client approves the estimate in writing. A change does not alter the agreed SRS baseline until approved.

9.2 Out of scope

- Multi-branch or SaaS tenancy, subscriptions, trials and paywalls.
- Inventory, stock control, HR, payroll, or instrument interfacing such as HL7 / ASTM.
- Native Android or iOS applications or a phlebotomist mobile application.
- Advanced analytics or business intelligence and payment-gateway collections.
- Regional-language report templates; report language in this phase is English.
- WhatsApp / WABA messaging.
- Any feature or service not stated in this SRS.

9.3 Recorded commercial particulars

FIELD	RECORDED TERM
Supplier	KSpark Digital Services (legal name: Kalpana Singh)
GSTIN	09HULPS0015P1ZY
Development contract	₹60,000 fixed total; tax treatment recorded as not applicable.
AMC fee	₹2,000 per month; ₹24,000 per year equivalent. The monthly fee is stated as the AMC charge; invoice tax treatment is to be identified on the invoice if applicable.
Currency	Indian rupees (INR).

Appendix A. Implementation reference

Informational inventories from the implementation baseline.

These inventories identify the data areas and API groups supporting the requirements. They describe the current implementation baseline and do not create functionality beyond Section 3.

A.1 Data entities

Activity; Agent; Bill; BillItem; Branch (minimal); DeliveryAttempt; Doctor; DoctorInvite (minimal); Expense; Inquiry (minimal); Interpretation; Job; LabProfile; ModalityCase; NotificationTemplate; OnboardingProgress (minimal); OtpSession; Patient; Report; ReviewRequest (minimal); Signature; SmsCredit; Subscription (scaffolding only); SupportTicket; TatConfig; Test; TestCategory; TestPackage; TestPanel; Transaction; User; USGCase; WebBrowser (minimal); XrayCase.

A.2 API route groups

Authentication; employees and roles; patients; bills and cashbook; reports; tests / categories / panels / packages; USG; X-ray; modality cases; doctors; doctor portal / appointments; transactions; expenses; dashboard; analytics; exports; notifications; public verification; patient portal; settings; laboratory setup; support tickets; background jobs; audit log; minimal branches; enquiries.

Appendix B. Approval and sign-off

Review and approval confirms agreement with the scope, payment schedule, acceptance method, client dependencies, exclusions and AMC terms set out in this SRS.

ROLE	NAME	SIGNATURE	DATE
For Pure Path Lab (client)			
For KSpark Digital Services			

Commercial confirmation

Development contract: **₹60,000 total**, paid at the approved milestones. Basic AMC: **₹2,000 per month (₹24,000 per year)**, starting after the 30-day post-go-live defect-fix window. Immediate changes and enhancements require separate written approval and a separate estimate.
